Education

K L University

Aug 2024 – May 2028

B.Tech in Computer Science and Engineering – 9.09 CGPA

Vaddeswaram, AP

Projects

CertifyMe – Certification Tracking Platform | *Spring Boot, PostgreSQL, ReactJS, REST APIs* **Feb 2026 – Present**

- Engineered and deployed a production-ready full-stack platform supporting certification workflows for 4000+ students across academic departments.
- Designed scalable backend architecture using Spring Boot, Hibernate, and PostgreSQL, improving API reliability and admin monitoring efficiency.
- Implemented role-based access control for students, faculty, and administrators, enabling secure real-time certificate validation and approval workflows.
- Optimized PostgreSQL queries and reporting pipelines, improving dashboard performance and reducing backend response latency.
- Built REST APIs and responsive ReactJS interfaces for certificate submission, tracking, and renewal workflows.
- Live: certifymeonline.vercel.app | [GitHub: Repository](#)

ManageYour Project – Project Management Portal | *Node.js, PostgreSQL, ReactJS, REST APIs* **Nov 2025 – Present**

- Built a scalable project submission and evaluation platform for students and faculty with optimized end-to-end workflow management.
- Developed backend APIs using Node.js and PostgreSQL for project submission, mentor review, approval tracking, and evaluation workflows.
- Designed normalized relational database structures for project lifecycle management, improving record consistency and reporting efficiency.
- Improved request handling and backend workflow performance through optimized API structure and database operations.
- Created responsive ReactJS interfaces for project uploads, reviews, and academic progress monitoring.
- Live: manageyourproject.vercel.app | [GitHub: Repository](#)

URL Shortener with Rate Limiting | *Java, Redis Concepts, REST APIs, System Design*

2026

- Built a backend-focused URL shortener system with short link generation, redirect handling, and scalable request processing logic.
- Designed rate limiting and caching concepts to improve reliability, prevent abuse, and support high request throughput.
- Applied database indexing and optimized lookup strategies for faster URL resolution and reduced latency.
- Focused on system design principles including scalability, fault tolerance, and efficient API request handling.

Skills Summary

Profile: Backend-focused software engineering student building scalable systems with Spring Boot, Node.js, PostgreSQL, and Python. Strong focus on API performance, database optimization, debugging, and production-ready backend architecture.

Languages: Python, Java, JavaScript, SQL, C

Backend Engineering: Spring Boot, Node.js, REST APIs, Hibernate, PostgreSQL, MySQL

Systems & Performance: Query Optimization, API Optimization, Background Jobs, Async Processing, Caching, Rate Limiting, Debugging

Cloud & Developer Tools: AWS (EC2, S3 Basics), Oracle Cloud Infrastructure, Docker Basics, Git/GitHub, VS Code

Computer Science Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design Basics

Frontend: ReactJS, HTML, CSS, Tailwind CSS

Engineering Practices: CI/CD Basics, API Design, Scalable Backend Development, Problem Solving

Coding Profiles

- Solved 400+ DSA problems across LeetCode, HackerRank, and CodeChef with strong focus on algorithms, optimization, backend logic, and problem-solving under constraints.

Certifications

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional	Oct 2025
Oracle	
Oracle Cloud Infrastructure 2025 Certified Data Science Professional	Sep 2025
Oracle
